

Azithromycin

Other formats

If you need this information in another format such as audio CD, Braille, large print, high contrast, British Sign Language or translated into another language, please contact the PALS desk on 01271 314090 or at rduh.pals-northern@nhs.net.

What does azithromycin do and why is it needed?

Azithromycin is an antibiotic that is needed to treat bacterial infections, including chlamydia.

How is it taken?

Azithromycin is available as a tablet or capsule.

Dosage

Take azithromycin as instructed on patient medication label. Azithromycin should be taken either one hour before food or at least two hours after food.

How long does it take to work?

The medication will start working straight away. However, it is important to take the whole course of medicine that has been prescribed. This is because it takes a while for the antibiotics you have taken to kill the bacteria causing your infection.

When can I have sex again after treatment?

If taking azithromycin over several days: You must not have sex (even with a condom) until you and your partner (where applicable) have completed treatment.

It is best to avoid all sexual contact during this time (including oral sex, vaginal sex, anal sex and sex with a condom). It is important to wait until your sexual partner has also been treated.

What to do if you miss a dose

Take the missed dose when you remember during the day, as long as this is at least 12 hours before the next dose is due.

Other drugs / medicines

Do not take indigestion remedies at the same time as this medicine. If you need to take indigestion remedies, take them at least two hours before or after your dose of azithromycin.

Possible side effects

You may experience the following side-effects after taking the treatment. However in most cases, these effects are mild and will pass.

- Feeling nauseous (sick) and / or vomiting (being sick)
- Stomach cramps / pains
- Diarrhoea
- Headache
- Dizziness

As long as you do not actually vomit within 3 hours of taking your medication it should still be effective. If you vomit within less than 3 hours of taking your medication or if you are worried about any side-effects you experience, please contact the clinic.

What are the risks?

Azithromycin is well tolerated with a low incidence of side effects.

Follow up

If you do have sex during treatment (even with a condom), please contact the clinic on **01392 284960** and speak to a nurse for more information.

Further information

For more information about azithromycin, please read the information leaflet that comes with your drug or medicine.

For further information about sexual health, please visit our website at www.devonsexualhealth.nhs.uk

PALS

The Patient Advice and Liaison Service (PALS) ensures that the NHS listens to patients, relatives, carers and friends, answers questions and resolves concerns as quickly as possible. If you have a query or concern call 01271 314090 or email rduh.pals-northern@nhs.net. You can also visit the PALS and Information Centre in person at North Devon District Hospital, Barnstaple.

Have your say

Royal Devon University Healthcare NHS Foundation Trust aims to provide high quality services. However, please tell us when something could be improved. If you have a comment or compliment about a service or treatment, please raise your comments with a member of staff or the PALS team in the first instance.

Tell us about your experience of our services. Share your feedback on the Care Opinion website www.careopinion.org.uk.
