### What is an Ultrasound scan?

You are coming to hospital for an ultrasound scan. An ultrasound scan uses sound waves to make a picture of inside your body. This helps the Doctors work out how to look after you.

This is an ultrasound machine. It has different cameras on it which give us a picture of the inside of your body on the screen.

## When you arrive at the hospital

- Go to the Medical Imaging (X-ray) Department.
- Hospital staff can help you find it.
- Tell the person at X-ray reception your name and when your birthday is.
- You will sit in the waiting room. Hospital staff will call your name when it is your turn.

## What will happen?

	<p>The sonographer, who is the person that takes your pictures, will take you into the Ultrasound room for your scan.</p>
	<p>We will ask you to lie down. We will put some jelly on your skin. This will feel a bit cold.</p> <p>The sonographer will move the camera and the jelly over your skin.</p>
	<p>We need you to stay very still while we take the ultrasound pictures.</p>

## What will happen next?

We will give you a tissue to wipe off the jelly.

When we have enough pictures, you can move again.

## What happens now?

If you are not having any other scans, you can go home.

We will send a report of the scan to your doctor.

Your doctor will explain the results of your scan to you.
