

DPIA Reference	<i>DPIA1259</i>
DPIA Title	SimCapture, RILD
Summary of Proposal <p>This is provided to Information Governance Steering Group and Safety and Risk as an overview of the project. It is also published on the website and should provide the public with an understanding of the information asset and how data is protected as a standalone statement.</p>	<p>This project is to purchase of a new AV system called SimCapture (Laerdal Medical) which supports the delivery of Human Factors & Simulation education in the RILD building. The current SimView system (Laerdal Medical) has been failing over the last two years. The SimView system is no longer supported by the manufacturer. We use the current SimView system to stream simulated episodes of care (using a manikin or actor) from one room in RILD to another room in RILD. This supports psychological safety, fidelity of education and supports appropriate COVID regulations around social distancing.</p> <p>The issues we experience include connectivity and reliability. Since these have been occurring, we have engaged with digital services to help resolve. They have been able to provide limited support due to the specific nature and age of the systems but not an appropriate resolution.</p> <p>The use of AV systems are an integral element to support the safe delivery of simulation and human factors education / development across the Trust.</p> <p>There will be no personal data stored on this system apart from minimal staff contact details (name & work email address).</p>
