| DPIA Title | Datix Cloud IQ - System Information |
| <p style="text-align: center;">Summary of Proposal</p> <p>This is provided to Information Governance Steering Group and Satefy and Risk as an overview of the project. It is also published on the website and should provide the public with an understanding of the information asset and how data is protected as a standalone statement.</p> | <p>The proposal is to move RDE and NDHT onto 1 joint Datix Licence and to use one Datix Cloud IQ organisation across both organisations</p> <p>The RD&E had planned to move the capture (incidents, complaints and claims) modules from Datix Web to DCIQ by December 2021, as early stage construction/development had commenced. However, following the report to the joint Governance Committee this work was paused and the Safety and Risk System Manager at the RD&E was commissioned by the RD&E Interim Chief Nurse to outline the benefits of a collaborative approach to move both trusts from web to DCIQ simultaneously. The decision has been made to move to DCIQ as part of the intergration programme. This will cover RD&E and NDHT for the following 5 modules:</p> <ol style="list-style-type: none"> 1. Incidents 2. Feedback (complaints, PALS and compliments) 3. Claims 4. Enterprise Risk Manager (risk registers) 5. Mortality <p>DCIQ is beneficial as it will offer a wider range of capability in terms of reporting functions, more connectivity (one module will link to another for example mortality records will be able to link to risk and/or incidents). It will also offer the opportunity to purchase additional modules to support investigation, trending and theming activity</p> <p>DPIA to be continue to be reviewed with changes with the national reporting system for incidents changing from NRLS to LFPSE. This may mean incidents direct upload from DCIQ to the new national reporting system, DPIA to be reviewed and bought back when this work is out of trial stage nationally.
