

DPIA Reference	<i>DPIA1252</i>
DPIA Title	Neurophysiology Regional Shared Service
Summary of Proposal <p>This is provided to Information Governance Steering Group and Satefy and Risk as an overview of the project. It is also published on the website and should provide the public with an understanding of the information asset and how data is protected as a standalone statement.</p>	<p>In addition to the RD&E, the Neurophysiology Service runs clinics from locations in North Devon District Hospital and Torbay Hospital locations. The clinical systems that are used in these locations are provided by Optima Medical and are currently standalone instances, with different hosted solutions. The RD&E hold a regional licence for their software solution. There is a requirement for all patient results from these systems to be viewed and assessed from a central location, in this case from the Neurophysiology department at the RD&E. It will enable better patient care, reduce backlogs and improve operational efficiency. This work request is related to the current EEG and EMG system solutions (Neuroworks (IA1237) & Viking (IA1204/IA1237)).</p> <p>The key objective of this Project is to provide a supported solution for the implementation of a shared central location for EEG and EMG system patient results. This will enable the RD&E Service to have access to all regional patient data in one centralised location. The preferred location is the RD&E Digital Services hosted infrastructure.</p>
