

DPIA Reference	DPIA1280
DPIA Title	Use of Smart Speakers as a therapeutic tool at Mardon Neurorehabilitation centre
Summary of Proposal This is provided to Information Governance Steering Group and Safety and Risk as an overview of the project. It is also published on the website and should provide the public with an understanding of the information asset and how data is protected as a standalone statement.	<p>Mardon Neurorehabilitation centre would like to enable patients to use smart speakers to support patient rehabilitation. Therapeutic benefit is recognised and was found during a trial where a patient with limited limb mobility frequently used a smart speaker to facilitate independence in managing other digital devices, access to radio and entertainment; and therefore support the adjustment to their new disabilities. It is proposed that the devices would be on a 4-week loan period and require the patient to sign a consent form for the conditions of use.</p> <p>A SOP has been created to outline the suggested process for managing the devices for implementation.</p>
